

What is claimed is:

1. A pulley anchor dock for a shutter cord formed substantially in a U-shaped dock in an integrated manner; the dock comprising a bottom plate and a side plate located
5 respectively on a left side and a right side thereof, the bottom plate holding a closed fort-like holding seat in the center that is extended upwards, the holding seat having at least three interdental spaces corresponding to each other vertically to form a plurality of holding troughs, the corresponding holding
10 troughs forming a recess in-between to house two sheaves, two opposing holding troughs jointly holding a axle of the pulley, the pulley allowing the shutter cord to wind thereon to control lifting and lowering of a shutter.
